

NM FFA Floriculture Team Activity

All 4 students from each chapter will work as a team to complete the following scenario.

The following are materials allocated to you:

- 8 student class schedules
- 10 blank schedule planners
- 10 blank pieces of paper
- Sticky Notes
- Pens/Markers
- Master Schedule

Scenario:

Your team works in a commercial nursery/greenhouse and are hiring seasonal help for the spring. You have received numerous applications, with many of them being college-aged students. You have decided to hire 8 students for your nursery.

However, every student has a different class schedule, and are only allowed to work 20 hours a week. Your job is to come up with a work schedule for each of the students before the end of your shift.

The following are requirements of the schedule:

- Every student must work 20 hours per week
- The greenhouse must be watered every day, with at least 2 people present during this process
- Each student must work in the various areas of the nursery each week (cashier, watering, propagating, deliveries)
- It is a 10-minute drive from campus to the nursery, so please plan accordingly

You will have 45 minutes to complete the master schedule and each individual student schedule.
